EDUCATION

Shiv Nadar Institution of Eminence

B.Tech in Electrical and Computer Engineering — CGPA: 7.91

CBSE Class XII (2024): 84.6%

CBSE Class X (2022): 81.4%

Greater Noida, India

Aug 2024 – May 2028

Bharath Vidya Mandir, Tamil Nadu

WORK EXPERIENCE

Full Stack Developer Intern

Jun 2025 – Dec 2025

Hypr - Hyperlocal delivery in Qatar

Remote

- **Route Optimization:** Sub-10s route optimization by building a routing engine on Google OR-Tools constraint programming with time-window constraints over a traffic-aware Google Maps matrix
- **Full-Stack Platform:** 50% faster shop-to-driver assignment by designing and implementing a production-grade React Native and FastAPI platform on a modular, resilient backend
- **Systems Integration:** 1,000+ daily potential transactions supported by integrating Shopify, WooCommerce, Odoo ERP, and WhatsApp Cloud API into a FastAPI backend via webhooks

Freelance Software Developer

Jan 2026 – Jun 2026

Snatch It – Two-sided food-rescue marketplace, Qatar

Remote

- **Backend Architecture:** 38 REST endpoints across 7 domains on a modular, async FastAPI + MongoDB (Motor) backend – JWT/bcrypt RBAC, an inventory-consistent order-lifecycle state machine, and Haversine-based geospatial shop search
- **Seller Analytics Dashboard:** 3× faster dashboard loads by fetching 6 live metric endpoints (menu, orders, ratings, earnings) **concurrently** instead of sequentially; real-time view with pending-order alerts and pull-to-refresh sync
- **Cross-Platform Apps:** 21 screens across two production React Native (Expo) apps – buyer and seller – on a shared async API layer with secure token storage, cart/checkout, and pickup-slot scheduling

LEADERSHIP

Team Lead, Dev Team

Shiv Nadar Institution of Eminence

Google Developer Groups (GDG) On Campus

Aug 2025 – Present

- **System Architecture and Mentorship:** Selected as Dev Team Lead from a competitive pool of 100+ members to lead a 20-member team, mentoring 50+ students on backend architecture, Git-based collaboration, and scalable system design including queuing, cache-aside patterns, and entity isolation
- **Technical Execution:** Led development of campus-wide applications, conducted code reviews, and introduced advanced topics such as computer vision and applied AI through focused workshops

PROJECTS

Voice Agent Platform – Configurable AI Cold-Caller 📞: Architected a production voice-AI orchestrator (FastAPI/Python, Fly.io) exposing an OpenAI-compatible **streaming LLM endpoint**; new industries ship as swappable YAML packs with **zero code changes**. Engineered a per-call **finite-state machine** with distributed Redis state (TTL) and Postgres/**pgvector RAG**; hardened with **154 passing tests** and a 12-persona adversarial simulator running in-process for ~30s CI evals (May 2026)

Labyrinth – Real-Time Multiplayer Backend 🎮: Architected the Go backend of a multiplayer event platform using **goroutines and channels** for real-time message broadcasting and low-latency state synchronization; built a **mutex-guarded channel pool** and **TTL cache-aside** layer to reduce database load on hot paths (**GDSC Team, Apr 2025**)

FindYourDate – AI Matchmaker 📅: Led a team building an AI matchmaking platform scaled to **1,500+ users (250+ concurrent)** on a single VPS; implemented the **Hungarian algorithm** over OpenAI embeddings with Qdrant vector search for optimal bipartite similarity matching (**GDSC, Oct 2025**)

Scooby – Timetable Tool 📅: Launched a SvelteKit scheduling app adopted by **1,600+ users (35% of the student body)** within **72 hours**; designed an interval-overlap algorithm and Excel parser that cut collision checking from **15 mins to <30 secs** (Dec 2025)

ACHIEVEMENTS

National 1st – CBSE Robotics: Conceived a disaster management drone with LoRa-based communication

State 1st – Kalvium Coding: Secured first rank in Tamil Nadu state-level coding competition for schools

State 2nd – Robotics Competition: Secured second rank in Tamil Nadu state-level robotics competition

Hackathons: Won 1st at SSH for a CV-based garbage classifier and 3rd at ACM-W Hackathon for Brew, an AI tool

SKILLS

Languages: Python, Java, Go, TypeScript, JavaScript, C/C++

Full-Stack: FastAPI, React, React Native, SvelteKit, Node.js, REST APIs, GraphQL

Databases & DevOps: PostgreSQL, MongoDB, Redis, Supabase, Docker, CI/CD, Cloudflare, Git

AI/ML: LangChain, LangGraph, RAG, Vector Search (Qdrant, FAISS, pgvector), OpenAI/Claude APIs, YOLOv8

CS Foundations: Data Structures & Algorithms, Concurrency, Distributed Systems, System Design

Embedded: Raspberry Pi, Arduino, ESP32
